

Converting your Douglas System to NexLight is SIMPLE.

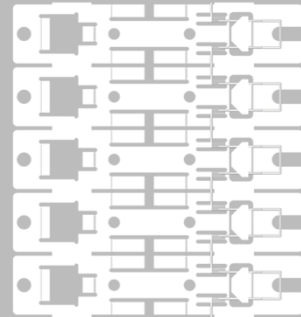

STEP 1

Replace your WLC-4150 (or older) with a NexLight CRC1201 (IPC).

The CRC1201 can be mounted in the existing enclosure using CRC9000 mounting straps supplied by NexLight.

- *There is typically sufficient space at the bottom of a Douglas panel.*

STEP 2

Replace every WRD-3408z (or older) with a NexLight CRC2180 Relay Controller.

The CRC2180 can be mounted on the existing DIN Rail using DIN Rail Clips supplied by NexLight.

- *The CRC2180 is a more compact design than the Douglas Relay Controller, so space should not be an issue.*

STEP 3

Replace all the Douglas Field Devices with NexLight Field Devices.

You can re-use the panels, relays and data-bus.

This results in a very fast, non-intrusive way to update your system that will be supported for years to come.
